

Highly Adventurous Model Portfolio

30 June 2019

Factsheet

Objective

The Highly Adventurous Model Portfolio aims to achieve long term returns from a greater proportion of higher risk and higher volatility assets (e.g. real assets and company shares) than lower risk and lower volatility assets (e.g. cash and/or bonds). The other available Models are Conservative, Balanced, Moderately Adventurous and Adventurous, which all have lower risk/potential return.

Portfolio construction and philosophy

Our practised advisers guide clients to the appropriate Model, accounting for their risk profile, overall situation and objectives; we aim to maximise long run potential returns, while ensuring sufficient liquidity for short term needs.

A strategic (neutral) asset allocation is set for each Model. Our experienced investment committee meets monthly to determine (i) tactical asset allocation based on our market views and (ii) specific investments based on detailed research.

We seek to identify active managers in each asset sector who can add value over the medium and long term; passive funds may be used where this is not possible. We believe a long term, disciplined approach (with a focus on business quality), a concentrated portfolio and low portfolio turnover are usually best placed to provide long term outperformance. We avoid complex, opaque funds that we are unable to adequately analyse and do not invest in ourselves. We currently allocate to company shares and property through investment trusts and open-ended funds.

Where possible, we use fixed-fee products (e.g. pensions and ISAs) to hold investments which, combined with our own fixed-fee charges, minimise the ad-valorem charges, which can be punitive for higher value portfolios.

Implementation, monitoring and governance

Client portfolios are aligned as closely as possible with the appropriate Model and reviewed (i) regularly, (ii) if we consider important changes are required, and (iii) in response to changes in circumstances/objectives.

Models are reviewed monthly and any changes are approved by our investment committee, which includes highly experienced non-executive advisers. Review items include volatility and performance relative to agreed comparative indices, severe loss scenarios compared to those agreed with clients and deviations from the desired asset allocation. Actual client portfolio performances are also reviewed against the Model performances.

Performance

12 month total return to 30 June	2015	2016	2017	2018	2019
LWP Highly Adventurous (%)	8.3	1.4	27.1	13.5	5.7
IA Flexible Investment (%)	7.0	1.2	17.9	5.0	2.8
CPI Inflation (%)	0.0	0.4	2.7	2.4	2.0

Compound annual return to 30 June 2019	3 Yrs	5 Yrs	Since authorisation*
LWP Highly Adventurous (% p.a.)	15.1	10.8	11.3
IA Flexible Investment (% p.a.)	8.4	6.6	7.6
CPI Inflation (% p.a.)	2.4	1.5	1.6

Current Asset Allocation

Historical Asset Allocation

Performance commentary

In broad terms, in the last 12 months, we believe we benefited from allocations to (i) global company share funds that invest in quality businesses with notable allocations to the US, (ii) listed private equity, and (iii) global listed infrastructure.

Our asset allocation changes over time, as indicated by the chart above. The most significant developments over the last five years have been a decrease in UK company shares in favour of the US and Private Equity. We maintained our Property allocation until the post-Brexit referendum hiatus, then switched part into a Global Infrastructure fund, increasing portfolio diversification.

Outlook

Our investment strategy continues to be based on the belief that the global economy is expanding, which should persist, enabling productive businesses to continue to thrive. We expect stock markets to deliver attractive returns and our recommended asset allocation favours company shares. We believe p/e ratios and free cash flow yields of most stock markets are fairly valued compared with history. We are mindful of challenges to this view, including (i) the fear of rising inflation, which could lead to higher interest rate expectations, (ii) a slowdown in global economic growth, and (iii) if Brexit proves less damaging than feared, sterling could rise, which would adversely impact the value of overseas investments. We keep matters under constant review.

Top 10 holdings

Top 10 holdings	%
Fundsmith Equity	8.0
Lindsell Train Global Equity	8.0
Worldwide Healthcare Trust	8.0
GuardCap Global Equity	7.0
JPMorgan Japanese	7.0

Important information

Performance figures are on a bid-bid basis for 12-month periods ending 30 June of each year and for three and five years annualised to 30 June 2019. The source of performance data is London Wall Partners and Financial Express. Past performance is not a reliable indicator of future results; the value of investments and the income therefrom is not guaranteed and may go down as well as up. You may not get back what you invest. Returns are shown in sterling. Returns from investments in markets/currencies other than those of an investor's own country of residence may increase or decrease as a result of currency fluctuations. Returns shown are after fund management charges but before financial and investment advice fees, other charges and taxes, which will reduce the returns according to the charges and taxes for the products and services used to access them, and the personal tax position of an investor. This data was produced on 3 July 2019, and may be subject to retrospective revisions as investment performance data providers update their information.
