

# Highly Adventurous Model Portfolio

31 March 2022

Factsheet

## Objective

The Highly Adventurous Model Portfolio aims to achieve long term returns from a greater proportion of higher volatility assets (e.g. real assets and company shares) than lower volatility assets (e.g. cash and/or bonds). The other available Models are Conservative, Balanced, Moderately Adventurous and Adventurous, which all have lower risk/potential return.

## Portfolio construction and philosophy

Our practised advisers guide clients to the appropriate Model, accounting for their risk profile, overall situation and objectives; we aim to maximise long run potential returns, while ensuring sufficient liquidity for short term needs.

A strategic (neutral) asset allocation is set for each Model. Our experienced investment committee meets monthly to determine (i) tactical asset allocation based on our market views and (ii) specific investments based on detailed research.

We seek to identify active managers in each asset sector who can add value over the medium and long term; passive funds may be used where this is not possible. We believe a long term, disciplined approach (with a focus on business quality), a concentrated portfolio and low portfolio turnover are usually best placed to provide long term outperformance. We avoid complex, opaque funds that we are unable to adequately analyse and do not invest in ourselves. We currently allocate to company shares through investment trusts and open-ended funds.

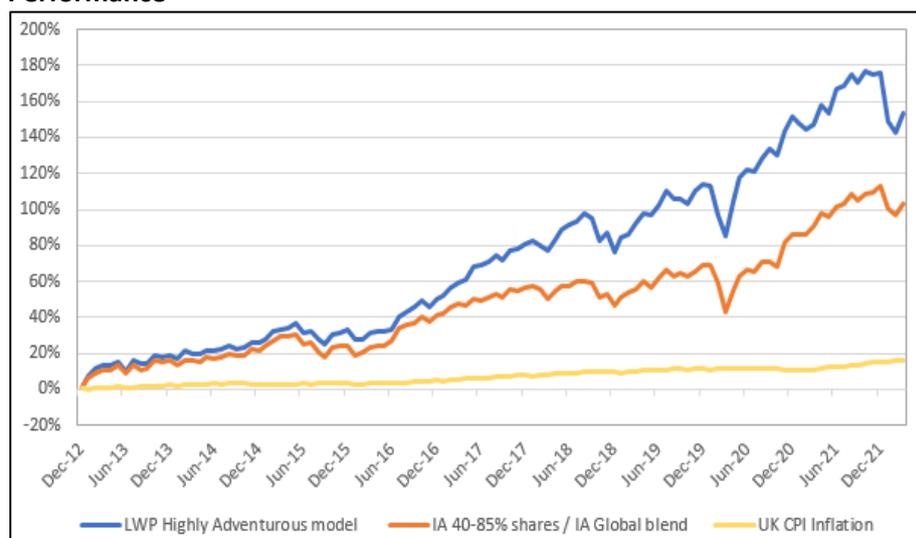

Where possible, we use fixed-fee products (e.g. pensions and ISAs) to hold investments which, combined with our own fixed-fee charges, minimise the ad-valorem charges, which can be punitive for higher value portfolios.

## Implementation, monitoring and governance

Client portfolios are aligned as closely as possible with the appropriate Model and reviewed (i) regularly, (ii) if we consider important changes are required, and (iii) in response to changes in circumstances/objectives.

Models are reviewed monthly and any changes are approved by our investment committee, which includes highly experienced non-executive advisers. Review items include volatility and performance relative to agreed comparative indices, severe loss scenarios compared to those agreed with clients and deviations from the desired asset allocation. Actual client portfolio performances are also reviewed against the Model performances.

## Performance

12-month total return to 31 March	2018	2019	2020	2021	2022
<b>LWP Highly Adventurous (%)</b>	<b>10.8</b>	<b>9.2</b>	<b>-3.8</b>	<b>33.2</b>	<b>2.8</b>
IA 40-85% shares / IA Global equal blend (%)	2.4	3.3	-8.0	33.4	6.8
CPI Inflation (%)	2.4	1.9	1.5	0.7	5.9

Compound annual return to 31 March 2022	3 Yrs	5 Yrs	Since authorisation*
<b>LWP Highly Adventurous (% p.a.)</b>	<b>9.6</b>	<b>9.7</b>	<b>10.8</b>
IA 40-85% shares / IA Global equal blend (% p.a.)	9.4	6.7	7.9
CPI Inflation (% p.a.)	2.7	2.5	1.9

LWP = London Wall Partners

IA = Investment Association

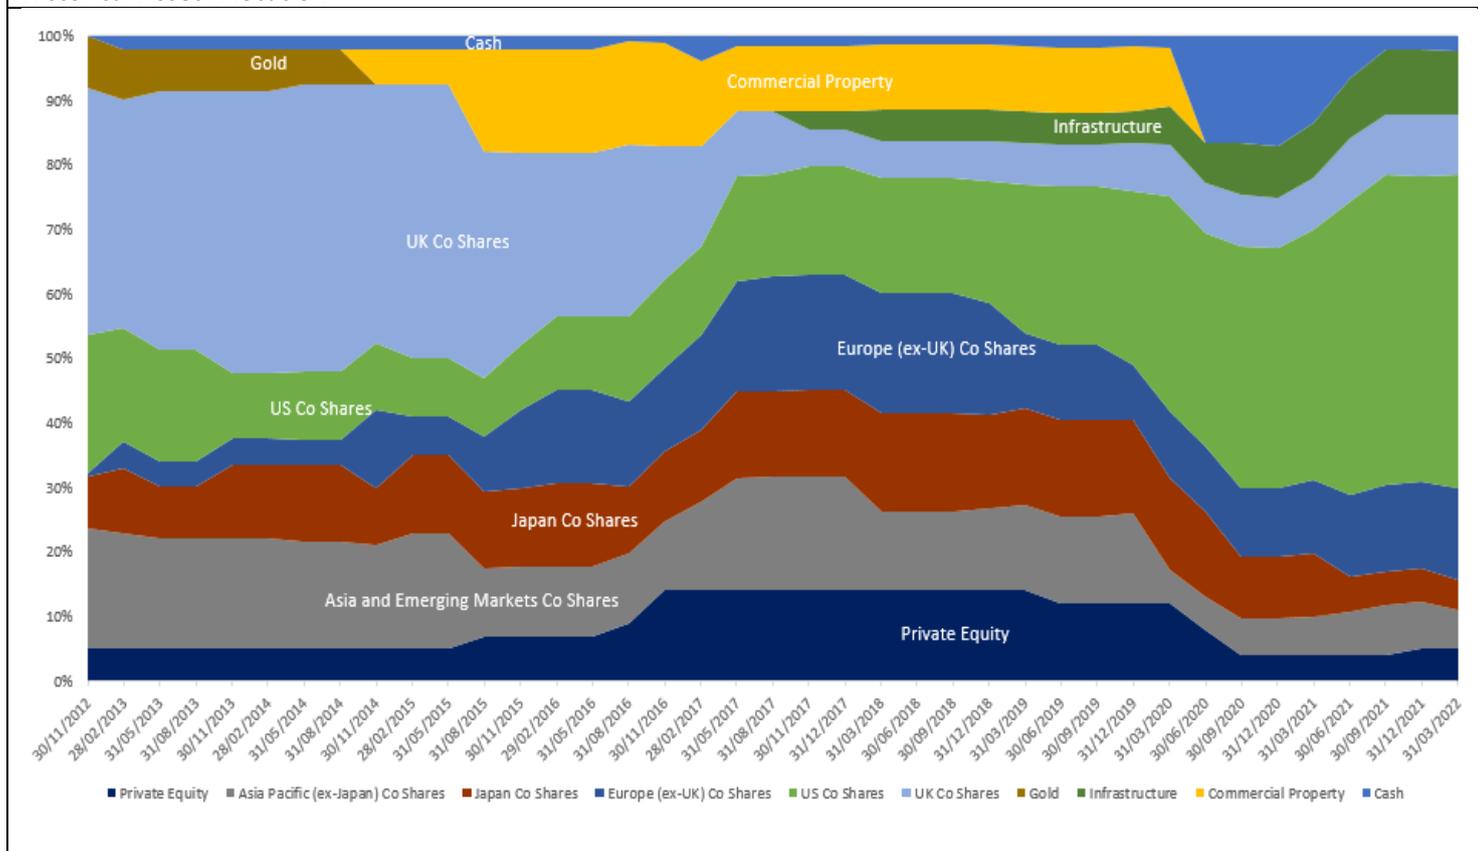

CPI = Consumer Prices Index

The comparator to 31 December 2019 was IA Flexible Investment

## Current Asset Allocation

## Historical Asset Allocation

### Performance commentary

In broad terms, in the last 12 months, while stock markets continued to make gains as the global economy recovered from the global pandemic, our focus on funds investing in high-quality and prospectively higher growth businesses lagged in the short term. Allocations to a listed private equity trust and global infrastructure fund supported returns.

Our asset allocation has changed over time, as indicated by the chart above. The most significant development has been an increase in US company shares as a result of a transition from regional funds to global company shares investments. We exited positions in commercial property investments and reduced allocations to smaller companies, which are typically less resilient and more sensitive to the economic cycle, and initiated a holding in global infrastructure.

### Outlook

Our investment strategy continues to be based on the belief that productive businesses should continue to deliver attractive returns over the long term and our recommended asset allocation favours company shares. We are mindful of challenges to this view, including (i) the impact of higher inflation on interest rate policy and the wider global economy, and (ii) the consequences of the war in Ukraine. We keep matters under constant review.

### Key facts

Inception date	30.11.12
Number of holdings (excl. cash)	10
Ongoing charges (% p.a.)	0.80
Max. drawdown (%)	-22.4 (-20.9)
Beta	1.03 (1.00)
Sharpe ratio	0.54 (0.55)

Note:

Figures in brackets are for the relevant IA index

### Important information

Performance figures are on a bid-bid basis for 12-month periods ending 31 March of each year and for three and five years annualised to 31 March 2022. The source of performance data is London Wall Partners and Financial Express. Past performance is not a reliable indicator of future results; the value of investments and the income therefrom is not guaranteed and may go down as well as up. You may not get back what you invest. Returns are shown in sterling. Returns from investments in markets/currencies other than those of an investor's own country of residence may increase or decrease as a result of currency fluctuations. Returns shown are after fund management charges but before financial and investment advice fees, other charges and taxes, which will reduce the returns according to the charges and taxes for the products and services used to access them, and the personal tax position of an investor. This data was produced on 6 April 2022, and may be subject to retrospective revisions as investment performance data providers update their information.
